

Shared Data, Shared Action: Tracking gender-inclusion and multi-level collaborative efforts through open data

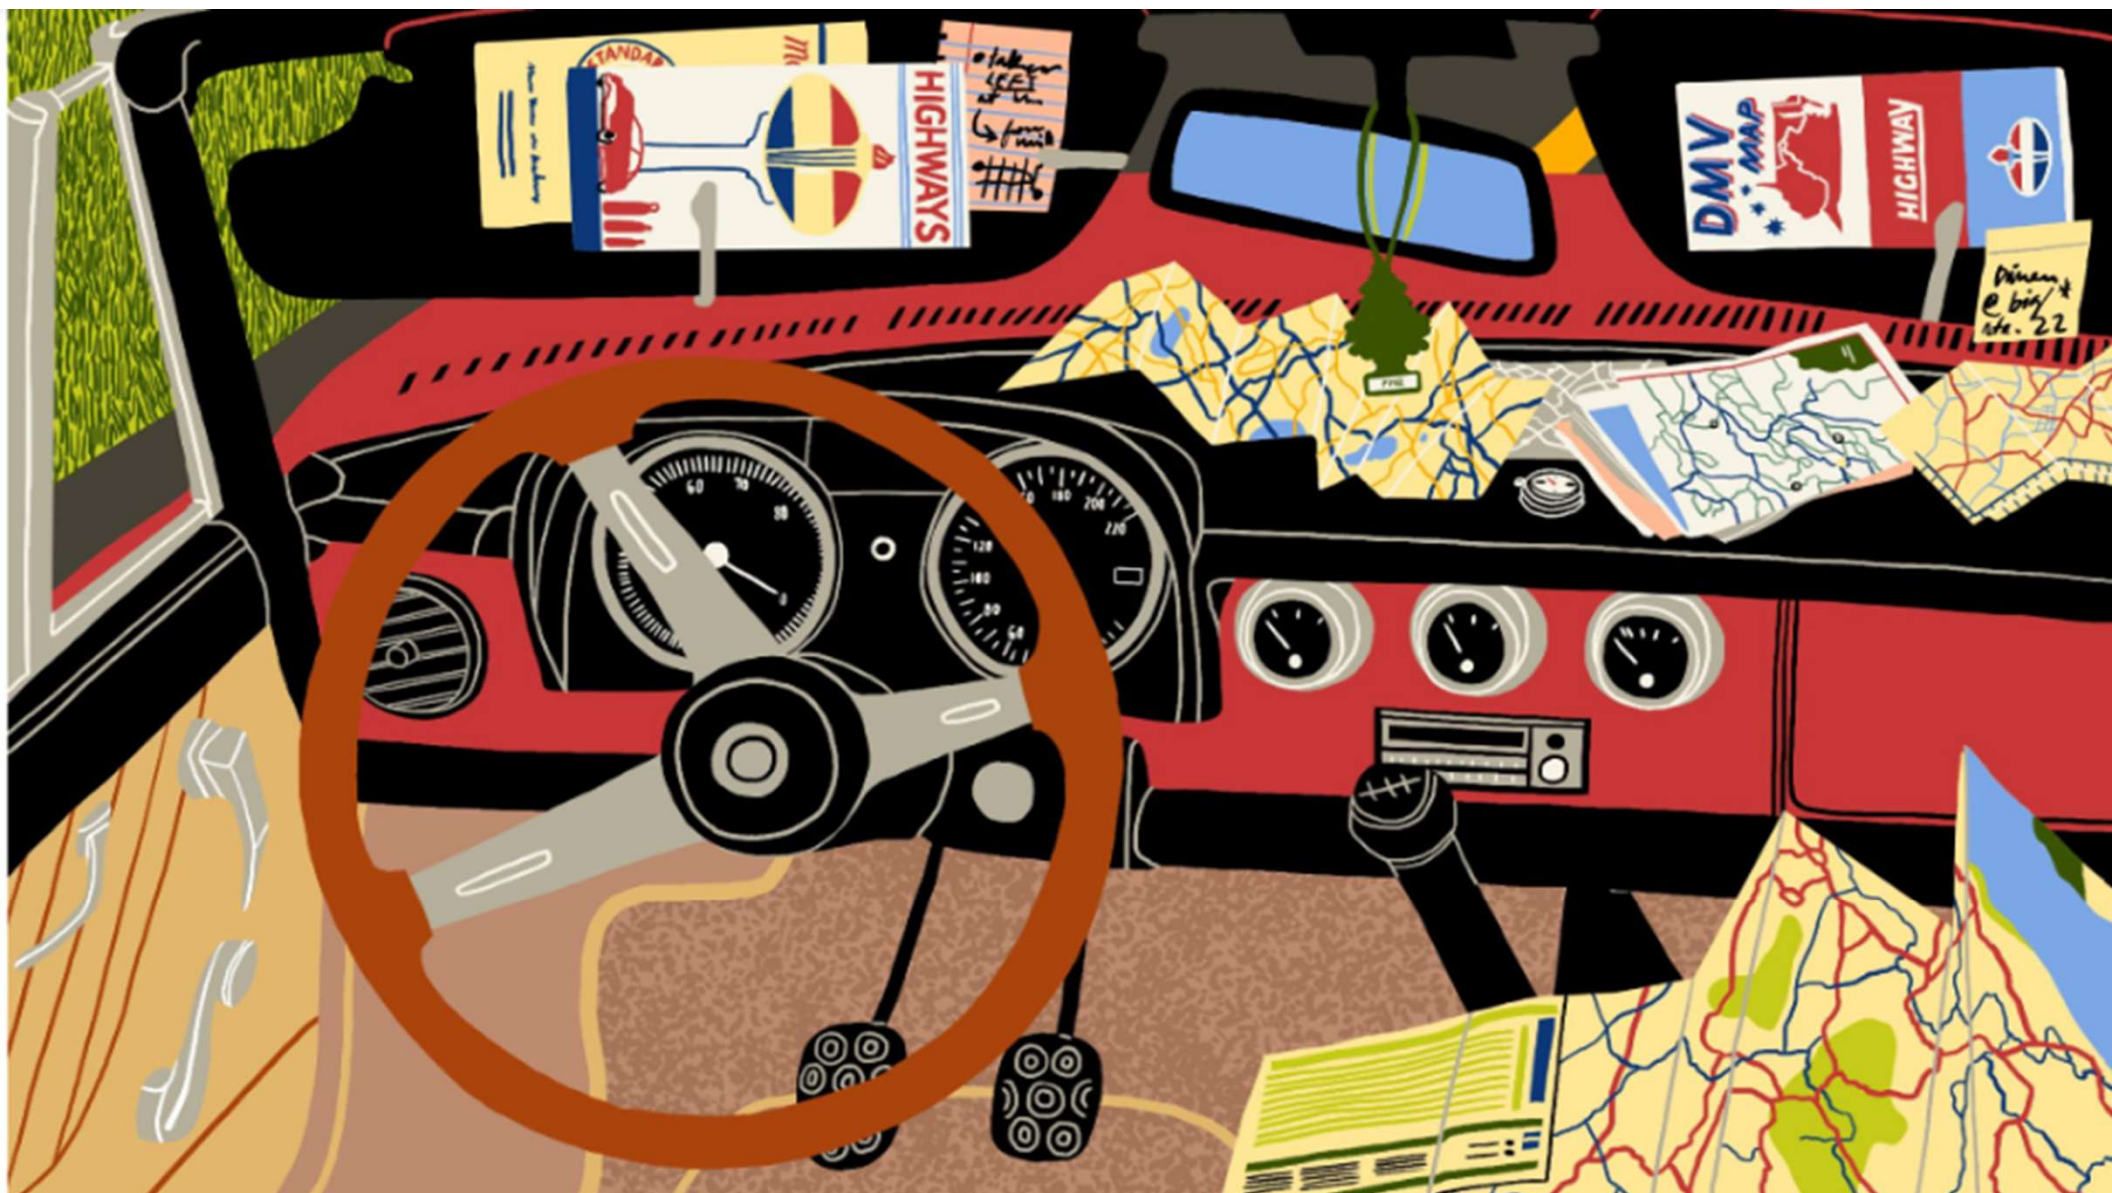

Transport and Climate Change Week 2026 - 8 October

Welcome & Remarks

**Carly Gilbert-Patrick, Secretary General, SLOCAT
Partnership on Sustainable Low Carbon Transport**

SLOCAT is the glue of the global sustainable, low carbon transport movement. Bringing together and representing 100+ organisations as one voice, and magnifying that voice to fast-track action.

Transport data today is...

! **Fragmented**
across institutions

! **Costly** to access

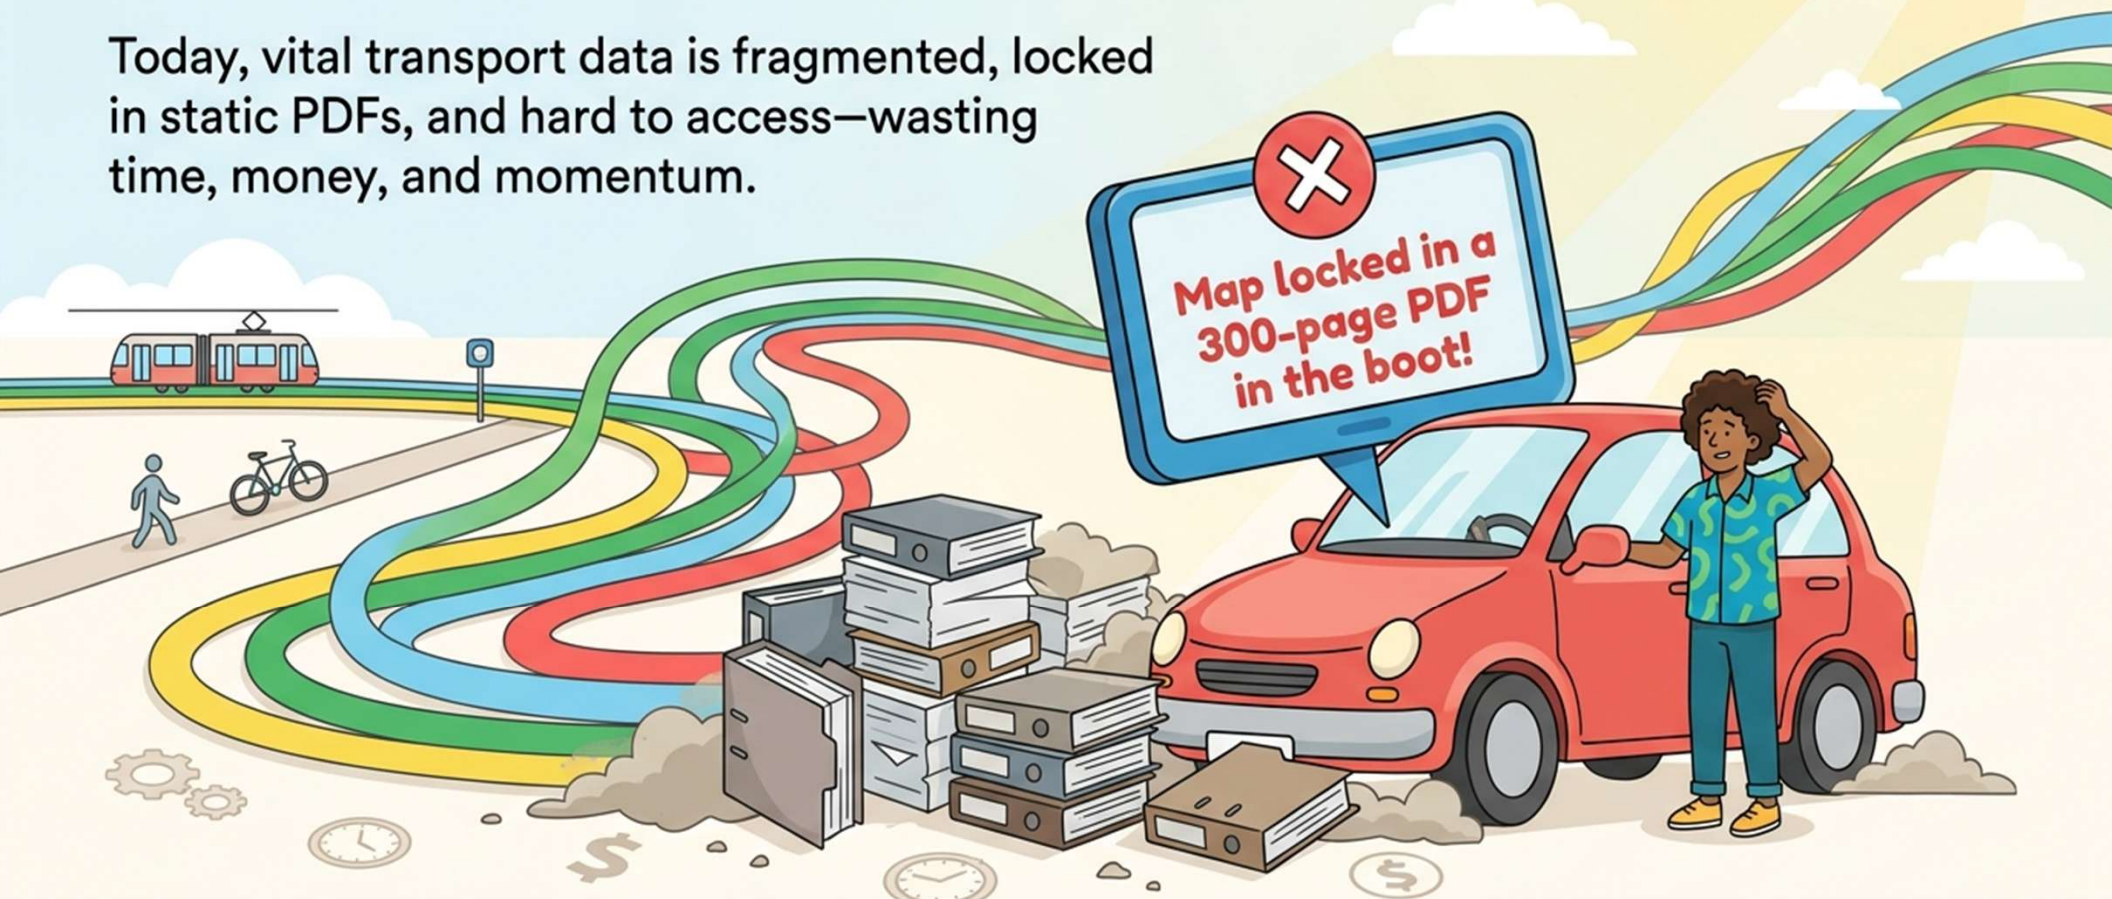

! **Inconsistent**
across countries
and formats

We are repeating the same exercise again and again: data collection, data cleaning, results modelling, and publication as PDF. The **data behind these PDFs remains difficult to find and is often inaccessible.**

We can't navigate the climate transition if our data is stuck in the boot.

Today, vital transport data is fragmented, locked in static PDFs, and hard to access—wasting time, money, and momentum.

TRANSPORT IS A SECTOR STILL RUNNING ON OIL

4.7% renewable share of transport energy

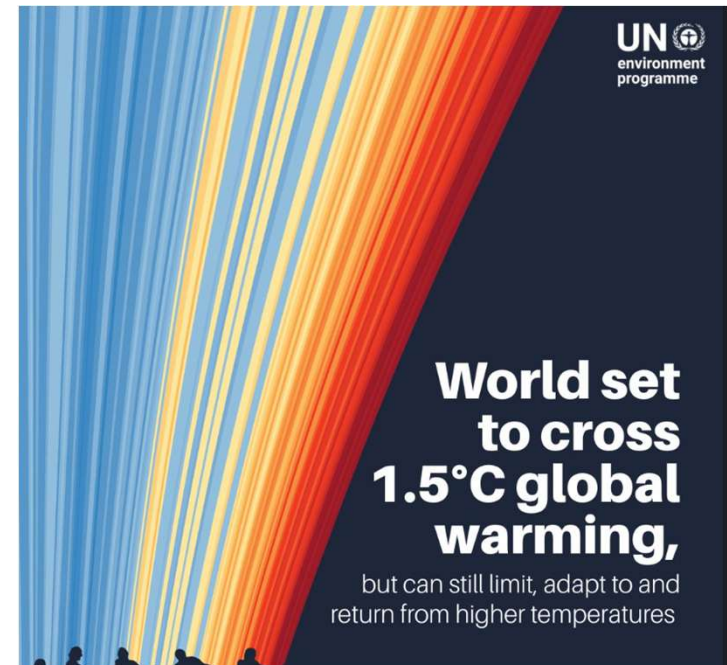

2% share of transport energy from electricity

90% of transport energy came from oil in 2023

21.9% of global CO2 emissions from transport (and fastest growing sector)

Overshoot Is Here. Transport Decides How High and How Long.

Action now can still limit how high warming peaks, shorten the duration of the peak and preserve the possibility of returning below 1.5°C through an 'overshoot, peak, and decline' pathway.

To close the gap between political pledges and real-world emission reductions, **we cannot rely on guesswork.**

Liberating the Data

The Transport Data Commons (TDC) frees critical information from silos, creating an open, digital public good for everyone.

Data builds trust and community

A community

The Transport Data Commons is a community effort, not one institution's database.

Regional voices

Voices from across regions shape what is collected and how it is used.

Transparency

Open-source methods let stakeholders verify, challenge and build on each other's work.

Thank You
